

ECU 1

GPIO

API - Types

Gpio_ChannelType

Gpio_PortIDType

Gpio_LevelType

Gpio_PortLevelType

API - Functions

void GPIO_Init(const Gpio_ConfigType * ConfigPtr)

Gpio_LevelType GPIO_ReadChannel(Gpio_ChannelType ChannelID)

void GPIO_WriteChannel(Gpio_ChannelType ChannelID, Gpio_LevelType Level)

Gpio_LevelType GPIO_FlipChannel(Gpio_ChannelType ChannelID)

Gpio_PortLevelType GPIO_ReadPort(Gpio_PortIDType PortID)

void GPIO_WritePort(Gpio_PortType PortID, Gpio_PortLevelType Level)

Configurations

- PortPinMode
- PortPinLevelValue
- PortPinDirection
- PortPinInternalAttach

| | | |
|-------------|-------------------------|--|
| Name | Channel ID | |
| Type | uint8 | |
| Range | | |
| Description | Numeric ID of Dio Pins. | |

| | | |
|-------------|---|---------------------------|
| Name | Gpio_LevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a DIO channel can have (input or output). | |

| | | |
|-------------|--|--|
| Name | Gpio_ConfigType | |
| Type | Structure | |
| Range | uint8 | |
| Description | This structure contains all post-build configurable parameters of the DIO driver. A pointer to this structure is passed to the DIO driver initialization function for configuration. | |

| | | |
|-------------|-----------------------------|--|
| Name | Gpio_PortIDType | |
| Type | uint8 | |
| Range | | |
| Description | Numeric ID of Port Numbers. | |

| | | |
|-------------|--|---------------------------|
| Name | Gpio_PortLevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a Port can have (input or output). | |

| Function Name | GPIO_Init | | |
|---------------|------------------------------|--|-----------------|
| Arguments | INPUTS | * ConfigPtr | Gpio_ConfigType |
| | | Pointer to post-build configuration data | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the GPIO module. | | |

| | | | |
|---------------|---|----------------|------------------|
| Function Name | GPIO_ReadChannel | | |
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of DIO pin | |
| | Output | GPIO_LevelType | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOT_OK | | 0 |
| Description | Returns the value of the specified DIO pin. | | |

| Function Name | GPIO_WriteChannel | | |
|---------------|-------------------------------------|---------------------|------------------|
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of DIO pin | |
| | | Level | Gpio_LevelType |
| | | Value to be written | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Set level of the specified DIO pin. | | |

| | | | |
|---------------|--|--------------------|-----------------|
| Function Name | GPIO_ReadPort | | |
| Arguments | INPUTS | PortID | Gpio_PortIDType |
| | | ID of DIO port | |
| | Output | GPIO_PortLevelType | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOT_OK | | 0 |
| Description | Returns the level of the specified DIO port. | | |

| Function Name | GPIO_WritePort | | |
|---------------|----------------------------------|---------------------|-----------------|
| Arguments | INPUTS | PortID | Gpio_PortIDType |
| | | ID of DIO port | |
| | | Level | Gpio_LevelType |
| | | Value to be written | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Set level of the specified port. | | |

CAN

API - Types

CAN_ConfigType “Structure”

API - Functions

void CAN_Init(const CAN_ConfigType* Config)

Std_ReturnType CAN_SetBaudrate(uint8 Controller, uint16 BaudRateConfigID)

void CAN_Write(uint32 Data)

uint32 CAN_Read(void)

| Function Name | CAN_Init | | |
|---------------|-----------------------------|--------------------------------------|----------------|
| Arguments | INPUTS | * ConfigPtr | CAN_ConfigType |
| | | Pointer to a selected configurations | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the CAN module. | | |

| Function Name | CAN_SetBaudRate | | |
|---------------|----------------------------------|--|--------|
| Arguments | INPUTS | Controller | uint8 |
| | | CAN controller whose baud rate will be set | |
| | | BaudRate | uint16 |
| | | Requested baud rate in kbps | |
| | Output | None | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOK | | 0 |
| Description | Set level of the specified port. | | |

| Function Name | CAN_Write | | |
|---------------|--------------------------------|-----------------|--------|
| Arguments | INPUTS | Data | uint32 |
| | | Data to be sent | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Send data from CAN controller. | | |

| | | |
|---------------|-----------------------------------|--------|
| Function Name | CAN_Read | |
| Arguments | INPUTS | None |
| | Output | uint32 |
| | Input/Output | None |
| Return | uint32 | |
| Description | Receive data from CAN controller. | |

ADC

API - Types

ADC_ConfigType “Structure”

ADC_Prescalar

ADC_RefVolatge

API - Functions

void ADC_Init(const ADC_ConfigType * Config_Ptr)

uint32 ADC_readChannel(uint8 CH_num)

| Function Name | ADC_Init | | |
|---------------|-----------------------------|--------------------------------------|----------------|
| Arguments | INPUTS | * ConfigPtr | ADC_ConfigType |
| | | Pointer to a selected configurations | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the ADC module. | | |

| Function Name | ADC_readChannel | | |
|---------------|---|-------------------|-------|
| Arguments | INPUTS | Ch_Num | uint8 |
| | | ID of ADC channel | |
| | Output | uint32 | |
| | Input/Output | None | |
| Return | uint32 | | |
| Description | Return value of the specified ADC channel | | |

GPT

API - Types

GPT_ConfigType “Structure”

GPT_ValueType uint8

API - Functions

void Timer_Init(const GPT_ConfigType * Config_Ptr)

void Timer_Start(GPT_ValueType Value)

void Timer_Stop(void)

| | |
|-------------|--|
| Name | Timer_ValueType |
| Type | uint8 |
| Range | The range of this type is μ C dependent (width of the timer register) and has to be described by the supplier. |
| Description | Type for reading and setting the timer values (in number of ticks). |

| | |
|-------------|--|
| Name | Timer_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the timer unit. |

| Function Name | Timer_Init | | |
|---------------|-------------------------------|--------------------------------------|------------------|
| Arguments | INPUTS | * ConfigPtr | Timer_ConfigType |
| | | Pointer to a selected configurations | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the Timer module. | | |

| Function Name | Timer_Start | | |
|---------------|-------------------------|----------------------|---------------|
| Arguments | INPUTS | Value | GPT_ValueType |
| | | Target time in ticks | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Start the timer module. | | |

| | | |
|---------------|------------------------|------|
| Function Name | Timer_Stop | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Stop the timer module. | |

Door Sensor

Must include the “GPIO driver”

API - Functions

`void D_Init(void)`

`uint8 D_ReadValue(Gpio_ChannelType ChannelID)`

| | | |
|---------------|------------------------------|------|
| Function Name | D_Init | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Initializes the door sensor. | |

| | | |
|---------------|-----------------------------------|-----------|
| Function Name | D_ReadValue | |
| Arguments | INPUTS | ChannelID |
| | Output | uint8 |
| | Input/Output | None |
| Return | uint8 | |
| Description | Get the state of the door sensor. | |

Light Switch

Must include the “GPIO driver”

| API - Functions |
|--|
| void L_Init(void) |
| uint8 L_GetState(Gpio_ChannelType ChannelID) |

| | | |
|---------------|-------------------------------|------|
| Function Name | L_Init | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Initializes the Light switch. | |

| | | |
|---------------|------------------------------------|-----------|
| Function Name | L_GetState | |
| Arguments | INPUTS | ChannelID |
| | Output | uint8 |
| | Input/Output | None |
| Return | uint8 | |
| Description | Get the state of the light sensor. | |

Speed Sensor

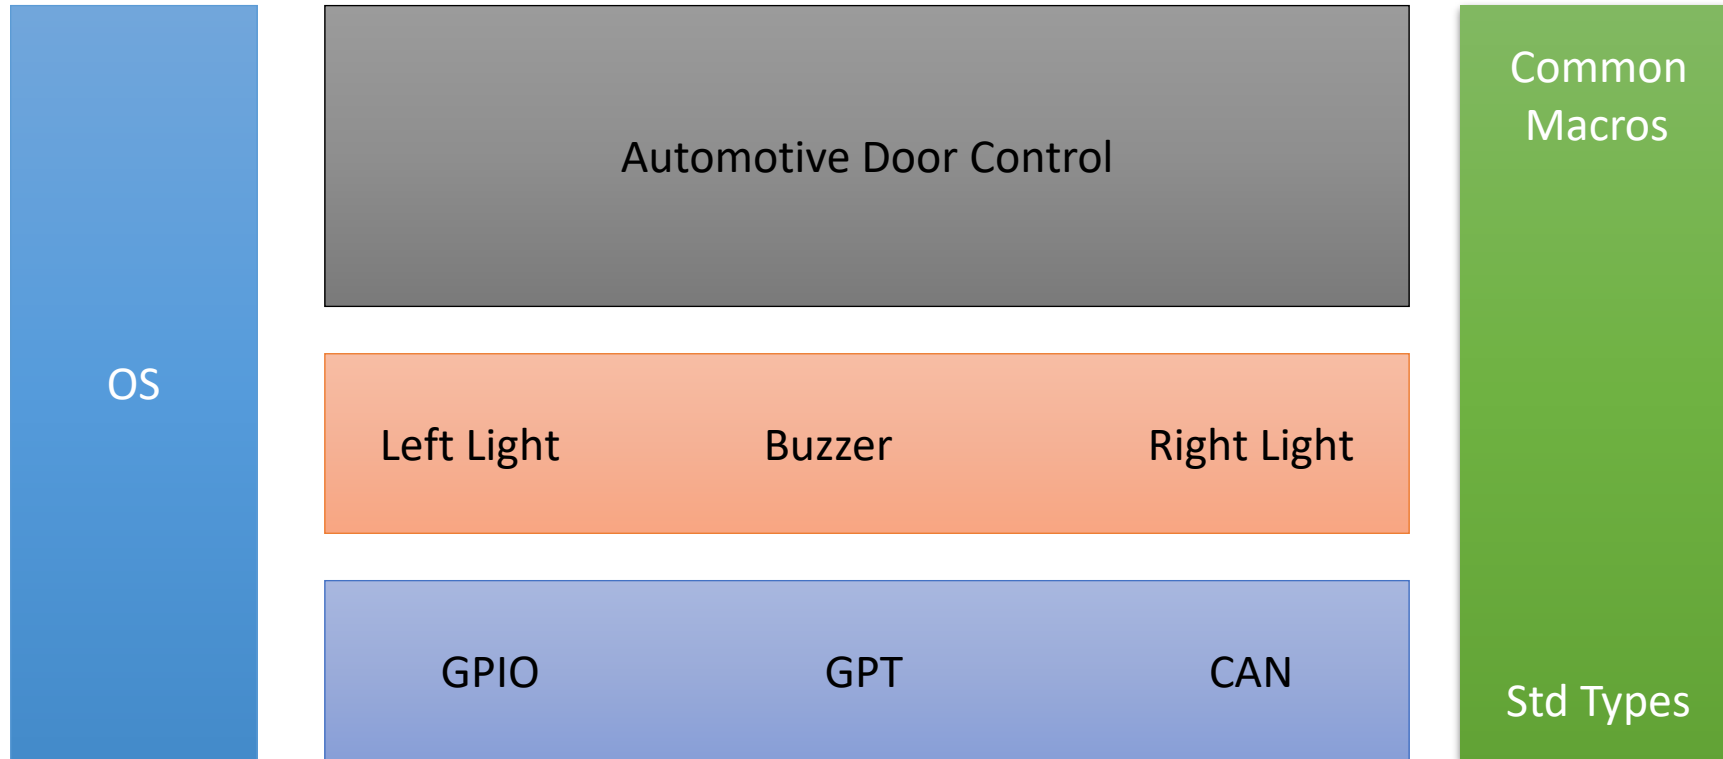

Must include the “ADC driver”

| API - Functions |
|--------------------------------------|
| void S_Init(void) |
| uint8 S_ReadValue(uint8 ADC_Channel) |

| | | |
|---------------|-------------------------------|------|
| Function Name | S_Init | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Initializes the Speed sensor. | |

| | | |
|---------------|------------------------------------|-------------|
| Function Name | S_ReadValue | |
| Arguments | INPUTS | ADC_Channel |
| | Output | uint8 |
| | Input/Output | None |
| Return | uint8 | |
| Description | Get the state of the Speed sensor. | |

ECU 2

GPIO

API - Types

Gpio_ChannelType

Gpio_PortIDType

Gpio_LevelType

Gpio_PortLevelType

API - Functions

void GPIO_Init(const Gpio_ConfigType * ConfigPtr)

Gpio_LevelType GPIO_ReadChannel(Gpio_ChannelType ChannelID)

void GPIO_WriteChannel(Gpio_ChannelType ChannelID, Gpio_LevelType Level)

Gpio_LevelType GPIO_FlipChannel(Gpio_ChannelType ChannelID)

Gpio_PortLevelType GPIO_ReadPort(Gpio_PortIDType PortID)

void GPIO_WritePort(Gpio_PortType PortID, Gpio_PortLevelType Level)

Configurations

- PortPinMode
- PortPinLevelValue
- PortPinDirection
- PortPinInternalAttach

| | | |
|-------------|-------------------------|--|
| Name | Channel ID | |
| Type | uint8 | |
| Range | | |
| Description | Numeric ID of Dio Pins. | |

| | | |
|-------------|---|---------------------------|
| Name | Gpio_LevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a DIO channel can have (input or output). | |

| | | |
|-------------|--|--|
| Name | Gpio_ConfigType | |
| Type | Structure | |
| Range | uint8 | |
| Description | This structure contains all post-build configurable parameters of the DIO driver. A pointer to this structure is passed to the DIO driver initialization function for configuration. | |

| | | |
|-------------|-----------------------------|--|
| Name | Gpio_PortIDType | |
| Type | uint8 | |
| Range | | |
| Description | Numeric ID of Port Numbers. | |

| | | |
|-------------|--|---------------------------|
| Name | Gpio_PortLevelType | |
| Type | uint8 | |
| Range | 0 | Physical state 0V |
| | 1 | Physical state 5V or 3.3V |
| Description | These are the possible levels a Port can have (input or output). | |

| Function Name | GPIO_Init | | |
|---------------|------------------------------|--|-----------------|
| Arguments | INPUTS | * ConfigPtr | Gpio_ConfigType |
| | | Pointer to post-build configuration data | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the GPIO module. | | |

| | | | |
|---------------|---|----------------|------------------|
| Function Name | GPIO_ReadChannel | | |
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of DIO pin | |
| | Output | GPIO_LevelType | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOT_OK | | 0 |
| Description | Returns the value of the specified DIO pin. | | |

| Function Name | GPIO_WriteChannel | | |
|---------------|-------------------------------------|---------------------|------------------|
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of DIO pin | |
| | | Level | Gpio_LevelType |
| | | Value to be written | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Set level of the specified DIO pin. | | |

| | | | |
|---------------|--|--------------------|-----------------|
| Function Name | GPIO_ReadPort | | |
| Arguments | INPUTS | PortID | Gpio_PortIDType |
| | | ID of DIO port | |
| | Output | GPIO_PortLevelType | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOT_OK | | 0 |
| Description | Returns the level of the specified DIO port. | | |

| Function Name | GPIO_WritePort | | |
|---------------|----------------------------------|---------------------|-----------------|
| Arguments | INPUTS | PortID | Gpio_PortIDType |
| | | ID of DIO port | |
| | | Level | Gpio_LevelType |
| | | Value to be written | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Set level of the specified port. | | |

CAN

API - Types

CAN_ConfigType “Structure”

API - Functions

void CAN_Init(const CAN_ConfigType* Config)

Std_ReturnType CAN_SetBaudrate(uint8 Controller, uint16 BaudRateConfigID)

void CAN_Write(uint32 Data)

uint32 CAN_Read(void)

| Function Name | CAN_Init | | |
|---------------|-----------------------------|--------------------------------------|----------------|
| Arguments | INPUTS | * ConfigPtr | CAN_ConfigType |
| | | Pointer to a selected configurations | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the CAN module. | | |

| Function Name | CAN_SetBaudRate | | |
|---------------|----------------------------------|--|--------|
| Arguments | INPUTS | Controller | uint8 |
| | | CAN controller whose baud rate will be set | |
| | | BaudRate | uint16 |
| | | Requested baud rate in kbps | |
| | Output | None | |
| | Input/Output | None | |
| Return | E_OK | | 1 |
| | E_NOK | | 0 |
| Description | Set level of the specified port. | | |

| Function Name | CAN_Write | | |
|---------------|--------------------------------|-----------------|--------|
| Arguments | INPUTS | Data | uint32 |
| | | Data to be sent | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Send data from CAN controller. | | |

| | | |
|---------------|-----------------------------------|--------|
| Function Name | CAN_Read | |
| Arguments | INPUTS | None |
| | Output | uint32 |
| | Input/Output | None |
| Return | uint32 | |
| Description | Receive data from CAN controller. | |

GPT

API - Types

GPT_ConfigType “Structure”

GPT_ValueType uint8

API - Functions

void Timer_Init(const GPT_ConfigType * Config_Ptr)

void Timer_Start(GPT_ValueType Value)

void Timer_Stop(void)

| | |
|-------------|--|
| Name | Timer_ValueType |
| Type | uint8 |
| Range | The range of this type is μ C dependent (width of the timer register) and has to be described by the supplier. |
| Description | Type for reading and setting the timer values (in number of ticks). |

| | |
|-------------|--|
| Name | Timer_ConfigType |
| Type | Structure |
| Range | |
| Description | This is the type of the data structure including the configuration set required for initializing the timer unit. |

| Function Name | Timer_Init | | |
|---------------|-------------------------------|--------------------------------------|------------------|
| Arguments | INPUTS | * ConfigPtr | Timer_ConfigType |
| | | Pointer to a selected configurations | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the Timer module. | | |

| Function Name | Timer_Start | | |
|---------------|-------------------------|----------------------|---------------|
| Arguments | INPUTS | Value | GPT_ValueType |
| | | Target time in ticks | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Start the timer module. | | |

| | | |
|---------------|------------------------|------|
| Function Name | Timer_Stop | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Stop the timer module. | |

Left Light

Must include the “GPIO driver”

| API - Functions |
|--|
| Void LL_Init(Gpio_ChannelType ChannelID) |
| void LL_ON() |
| void LL_OFF() |

| Function Name | LL_Init | | |
|---------------|-----------------------------|-----------------------|------------------|
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of a given channel | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the Left Light. | | |

| | | |
|---------------|---------------------|------|
| Function Name | LL_ON | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Left Light ON. | |

| | | |
|---------------|----------------------|------|
| Function Name | LL_OFF | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Left Light OFF. | |

Buzzer

Must include the “GPIO driver”

| API - Functions |
|---|
| Void B_Init(Gpio_ChannelType ChannelID) |
| void B_ON() |
| void B_OFF() |

| Function Name | B_Init | | |
|---------------|-------------------------|-----------------------|------------------|
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of a given channel | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the Buzzer. | | |

| | | |
|---------------|-----------------|------|
| Function Name | B_ON | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Buzzer ON. | |

| | | |
|---------------|------------------|------|
| Function Name | B_OFF | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Buzzer OFF. | |

Right Light

Must include the “GPIO driver”

API - Functions

Void RL_Init(Gpio_ChannelType ChannelID)

void RL_ON()

void RL_OFF()

| Function Name | RL_Init | | |
|---------------|------------------------------|-----------------------|------------------|
| Arguments | INPUTS | ChannelID | Gpio_ChannelType |
| | | ID of a given channel | |
| | Output | None | |
| | Input/Output | None | |
| Return | void | | |
| Description | Initializes the Right Light. | | |

| | | |
|---------------|----------------------|------|
| Function Name | RL_ON | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Right Light ON. | |

| | | |
|---------------|-----------------------|------|
| Function Name | RL_OFF | |
| Arguments | INPUTS | None |
| | Output | None |
| | Input/Output | None |
| Return | void | |
| Description | Make Right Light OFF. | |
